GoalChaser for Crescent Textile

Your Factory Never Sleeps. Now Your Information Won't Either.

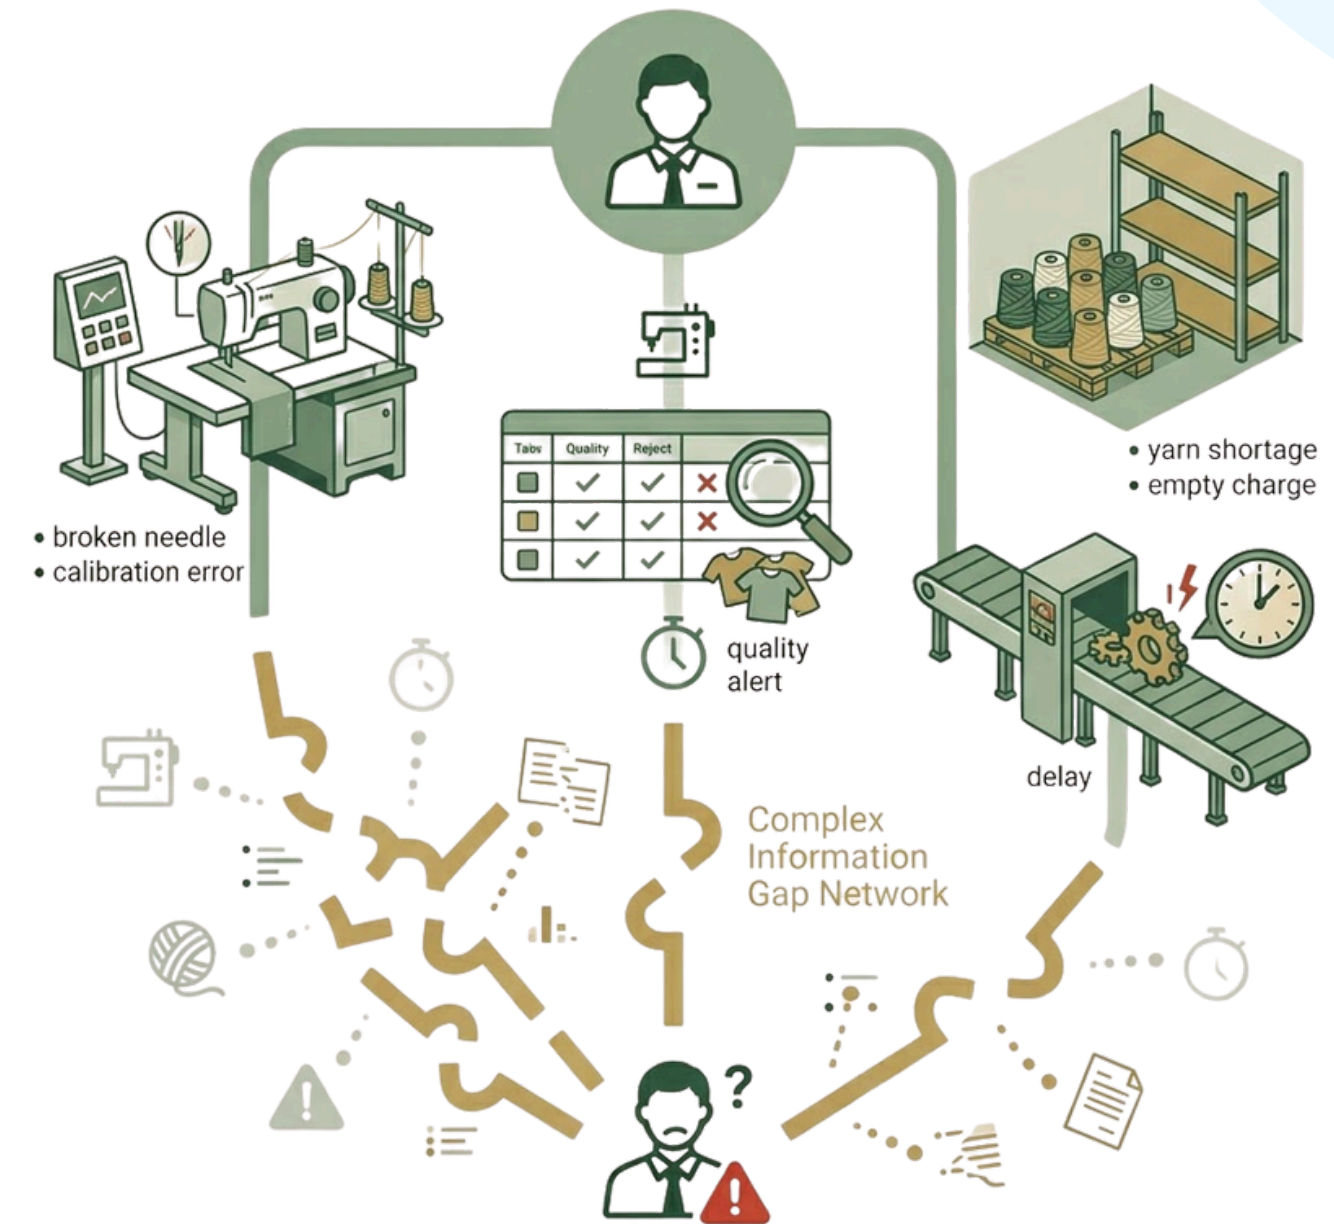

GoalChaser.co

Every Day, **Critical** Information Gets Lost

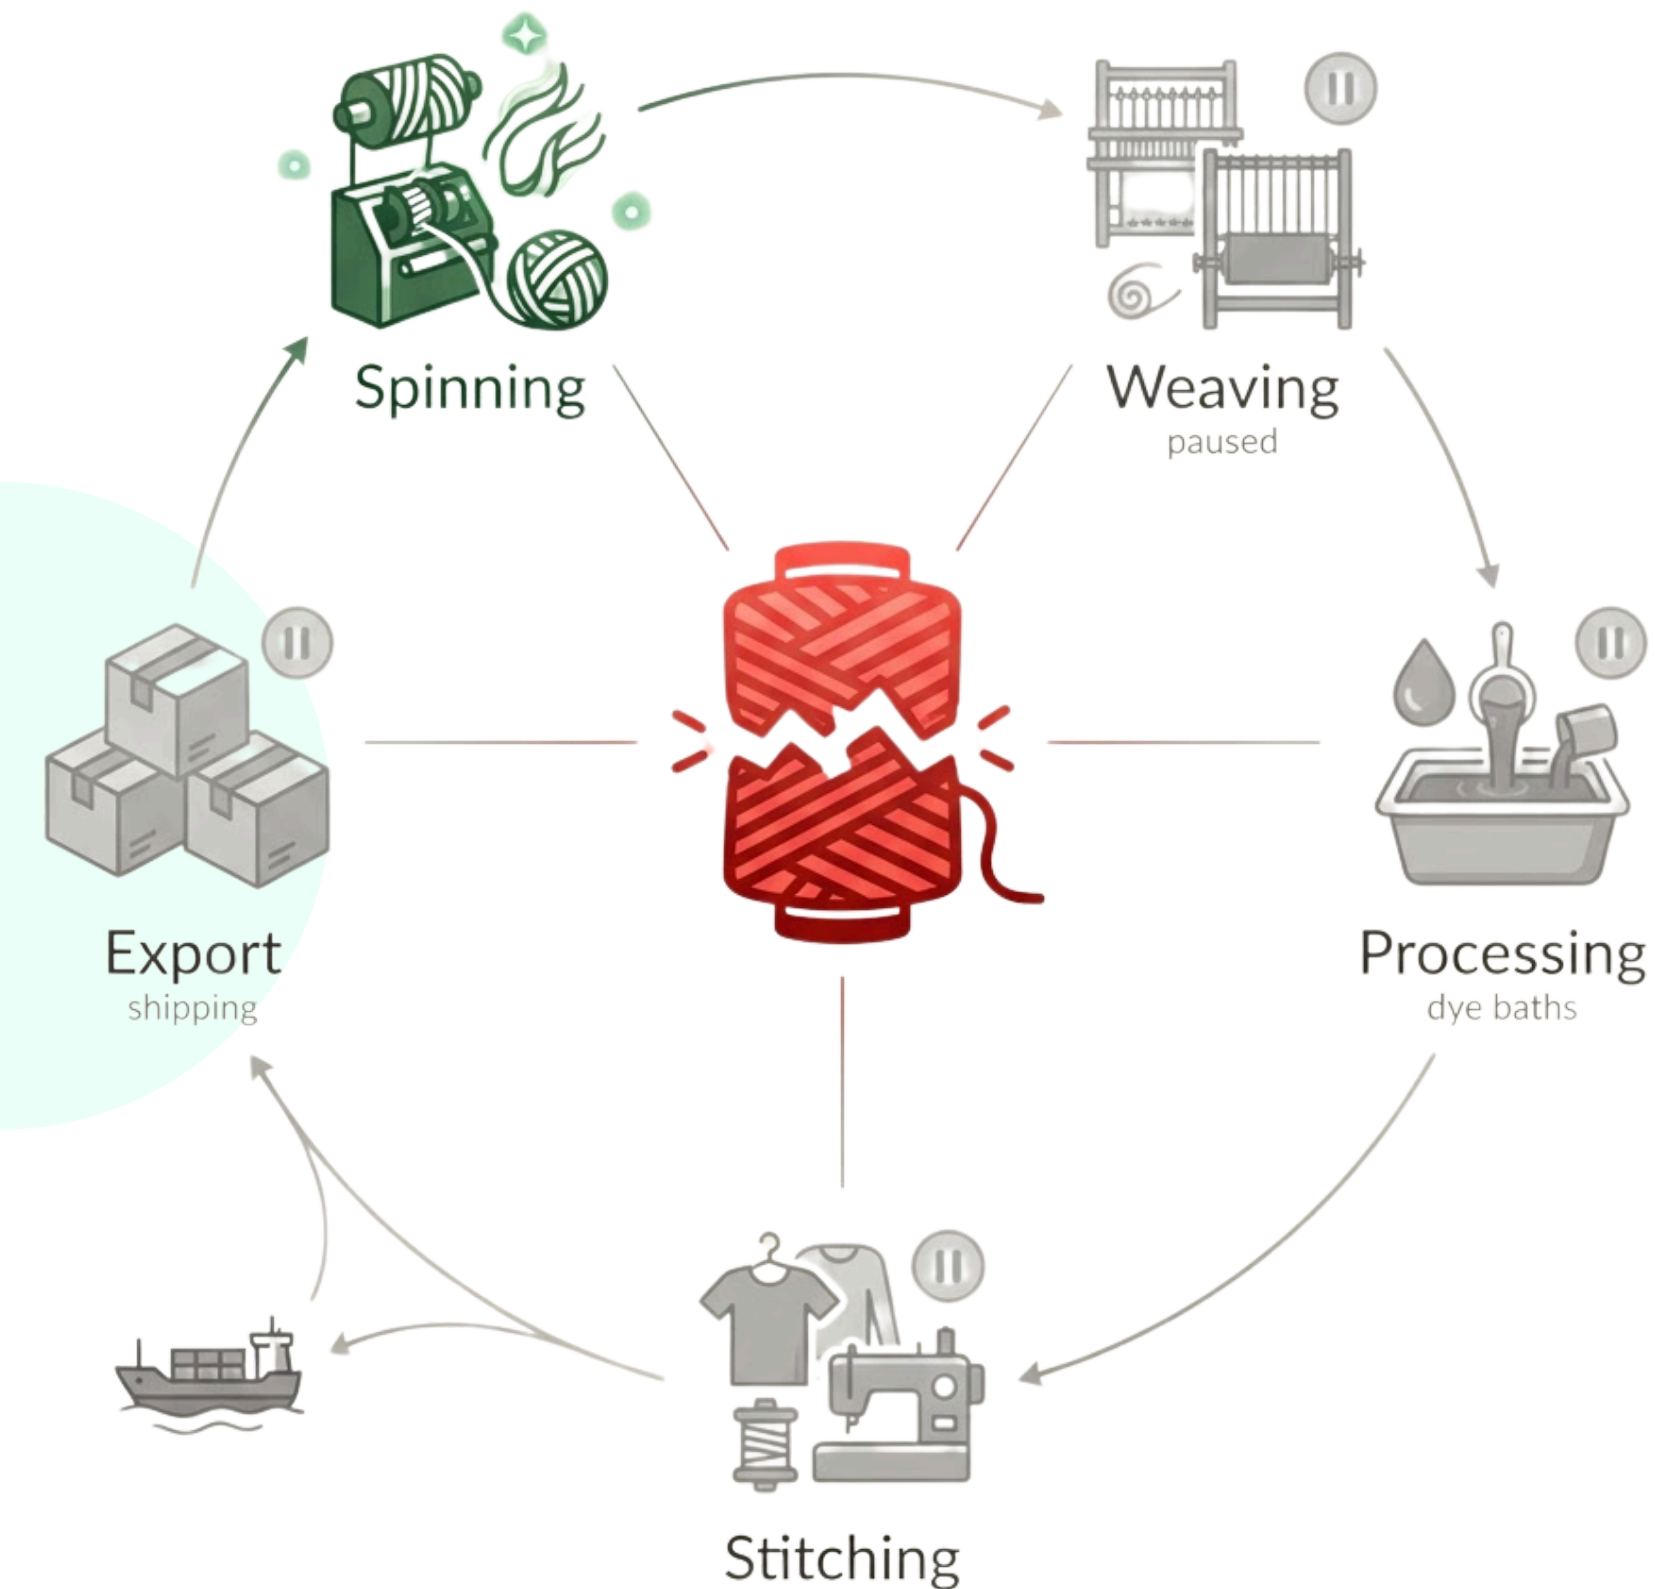

Not because people are careless.
Because the system doesn't capture it.

GoalChaser.co

— AI VoIP Task Planner —

One Department's **Delay** Becomes Everyone's Problem

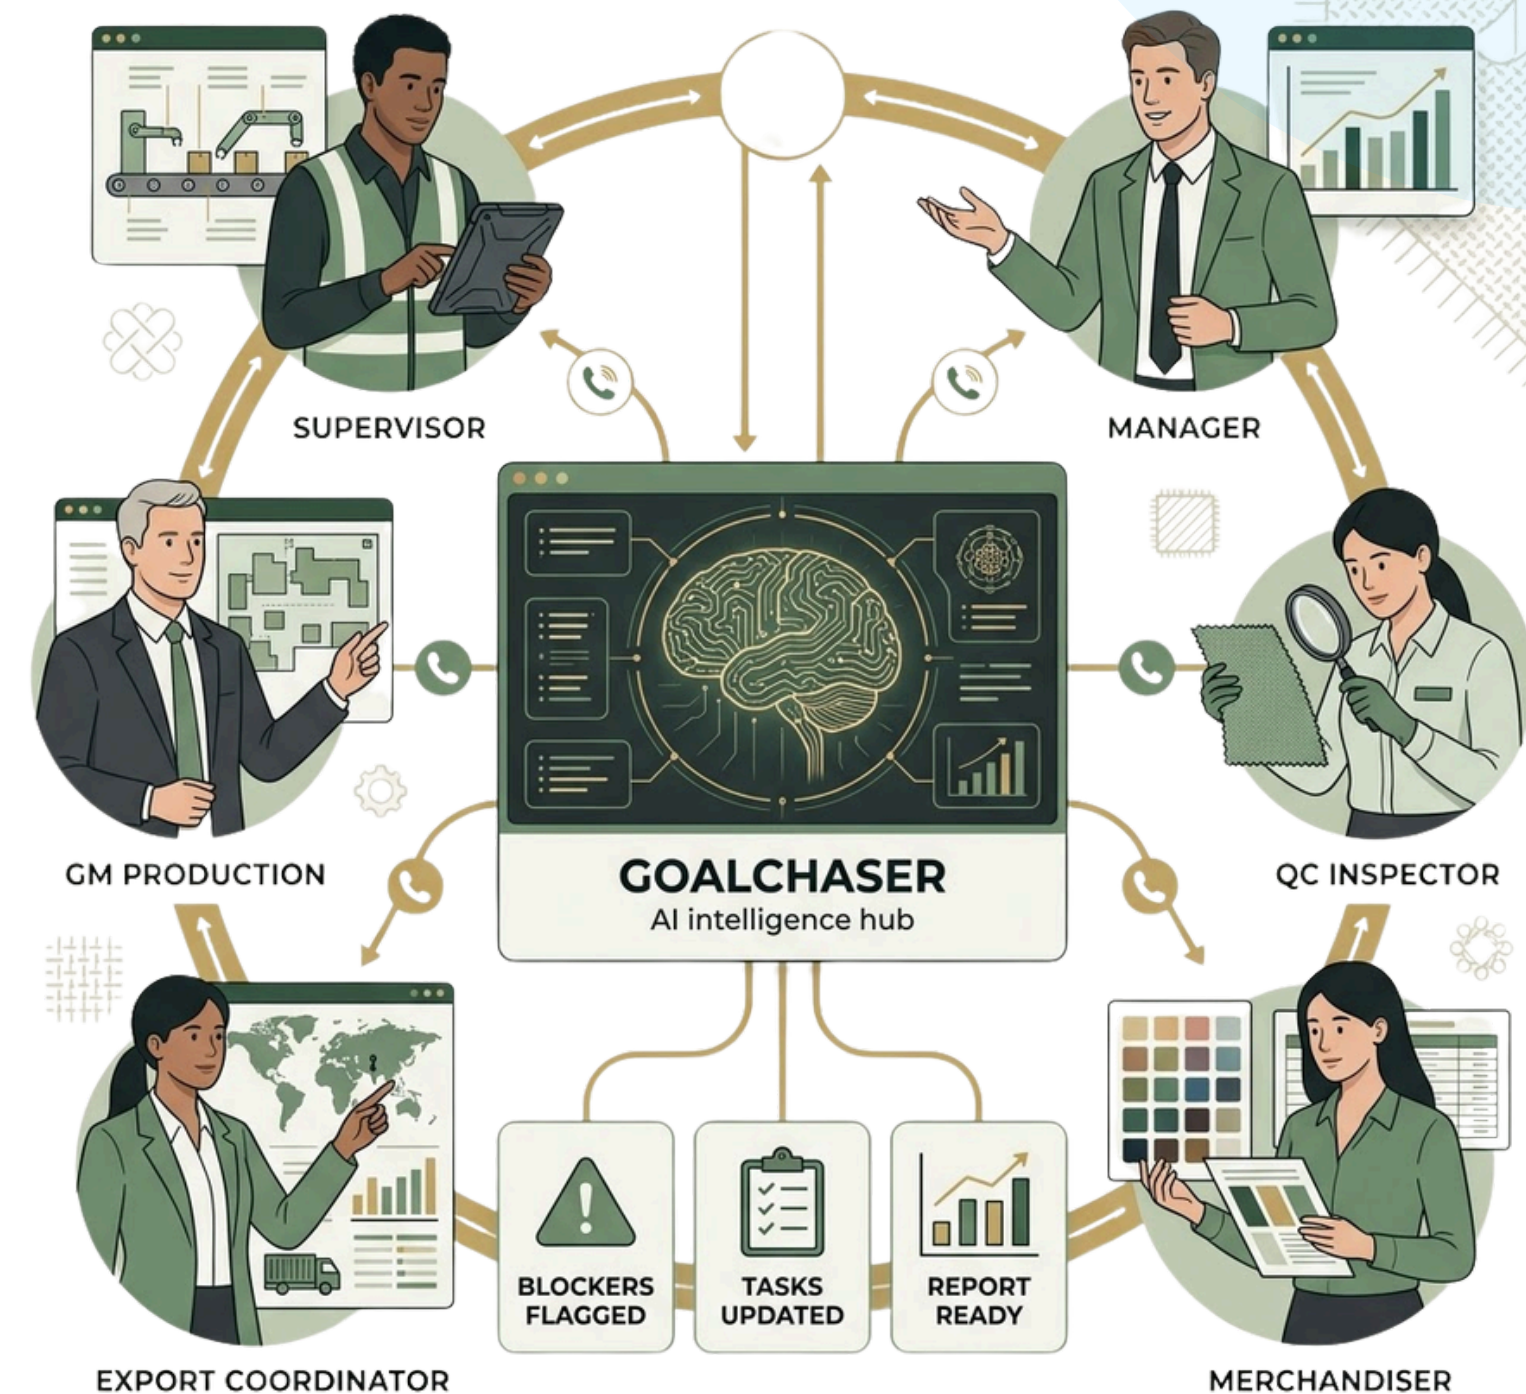

In a vertically integrated mill, nothing works in isolation.

- **Spinning delays** → weaving runs out of yarn
- **Weaving delays** → processing sits idle
- **Processing delays** → stitching lines stop
- **Stitching delays** → export misses the vessel
- **Missed vessel** → buyer receives a penalty invoice

Introducing GoalChaser.co

An AI That Manages Your Factory Through Phone Calls

- **Calls** your supervisors and managers at set times
- Listens, **logs**, and organizes what they say
- Flags **problems** and alerts the right person immediately
- **Generates** reports automatically — no one writes them

Zero Extra Work for Your Team.

Your supervisors just pick up the phone and talk. GoalChaser does the rest.

- Nothing new to install or learn on the floor
- Works with your **existing shift** schedule
- Escalates automatically - no one has to **chase** anyone
- Every conversation becomes a **record**

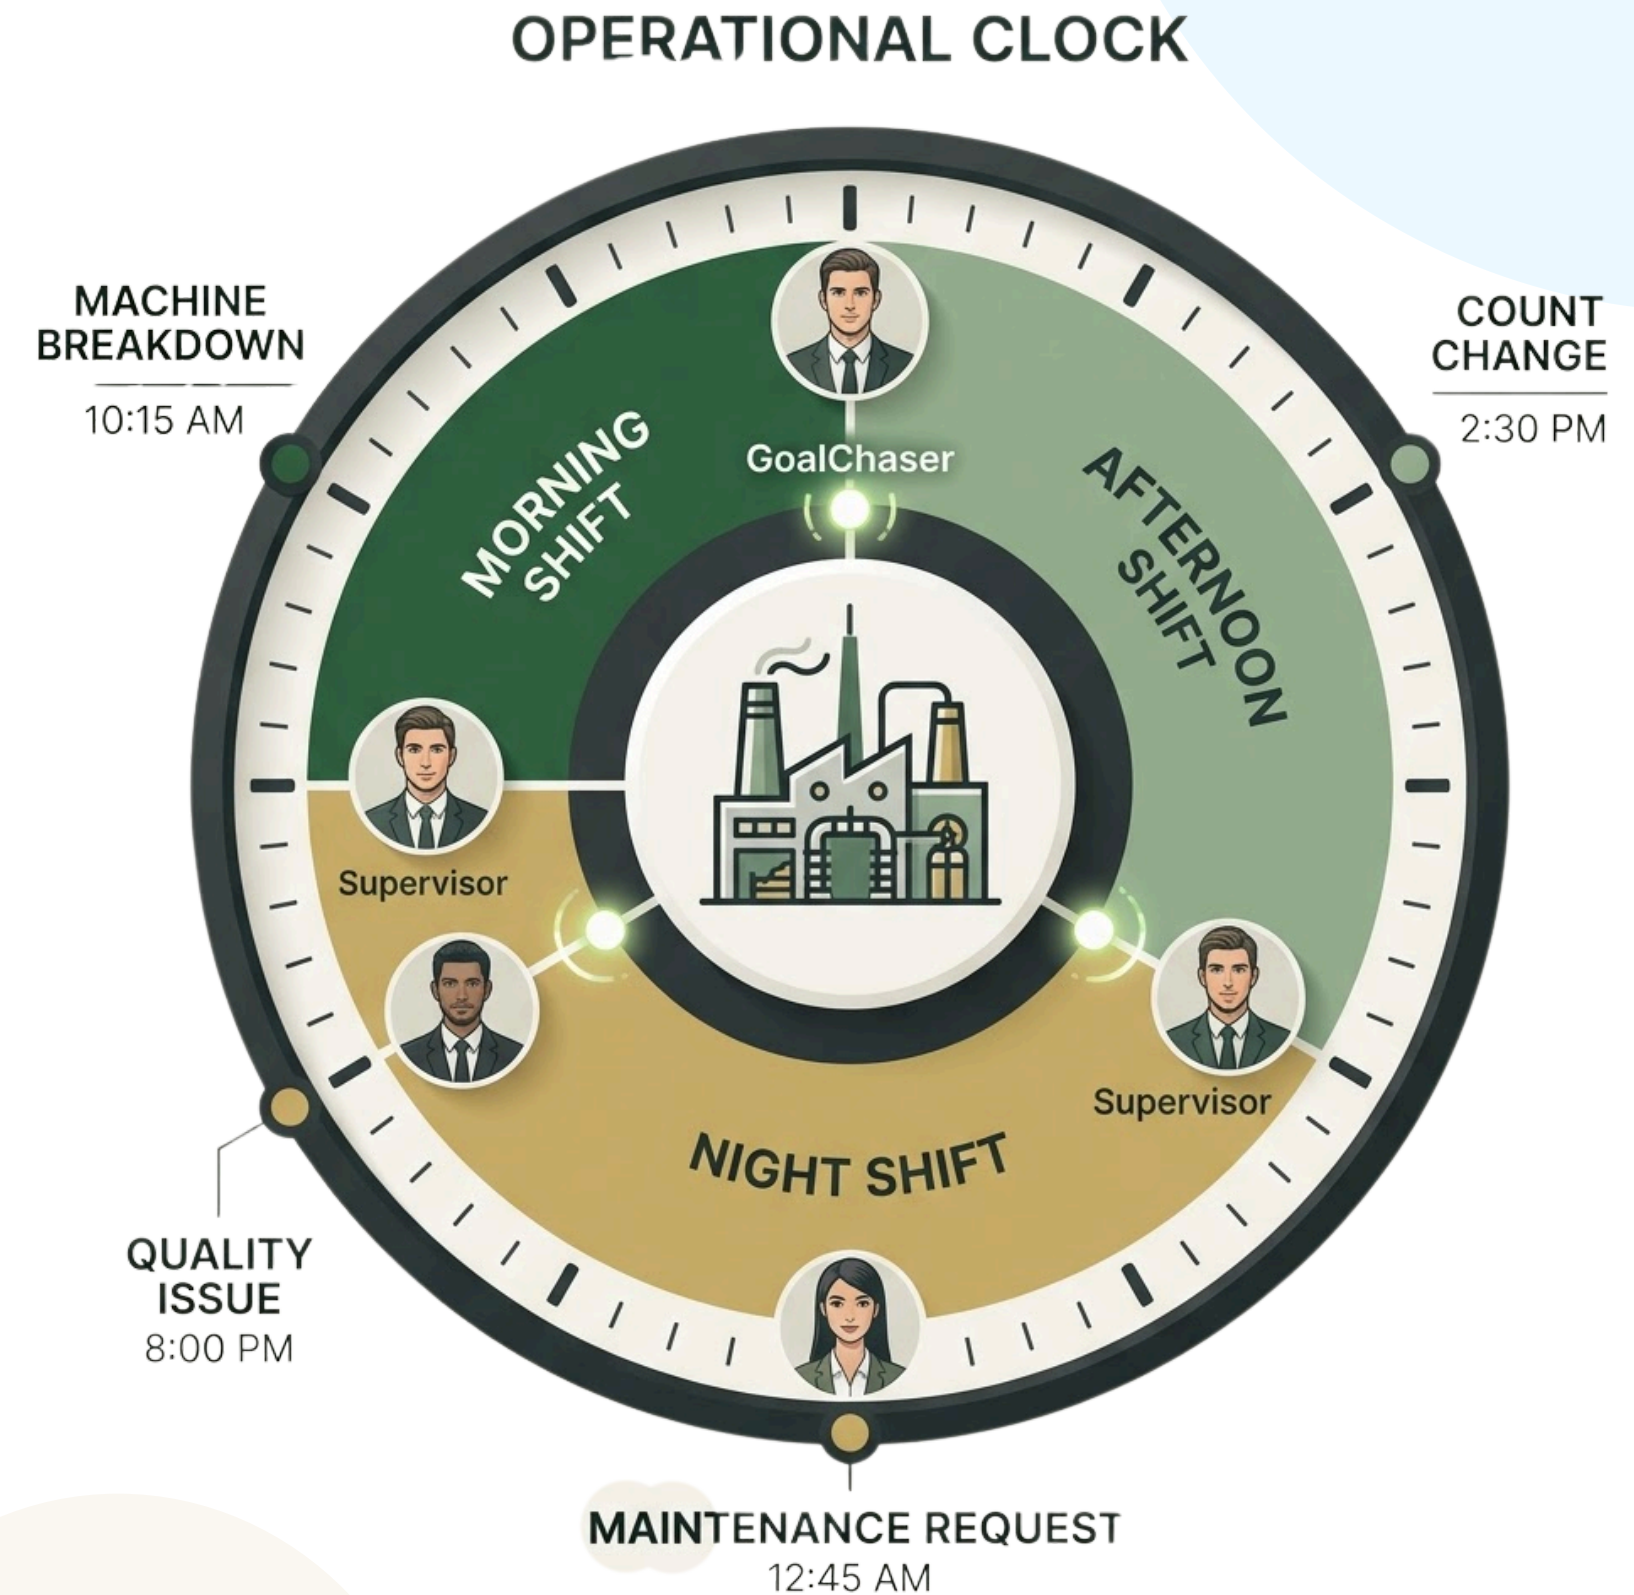

GoalChaser.co

What Happens at 2am Shouldn't Stay at 2am

Shift handovers lose critical information every night. GoalChaser captures all of it.

- Machine **stopped**? Maintenance called automatically
- **Count** changed? Next shift knows where to start
- **Loom running** below efficiency? Manager is alerted at home, not at 9am
- Wastage above **threshold**? Flagged, logged, and tracked automatically

GoalChaser.co

A Quality Hold **Shouldn't** Sit for 6 Hours

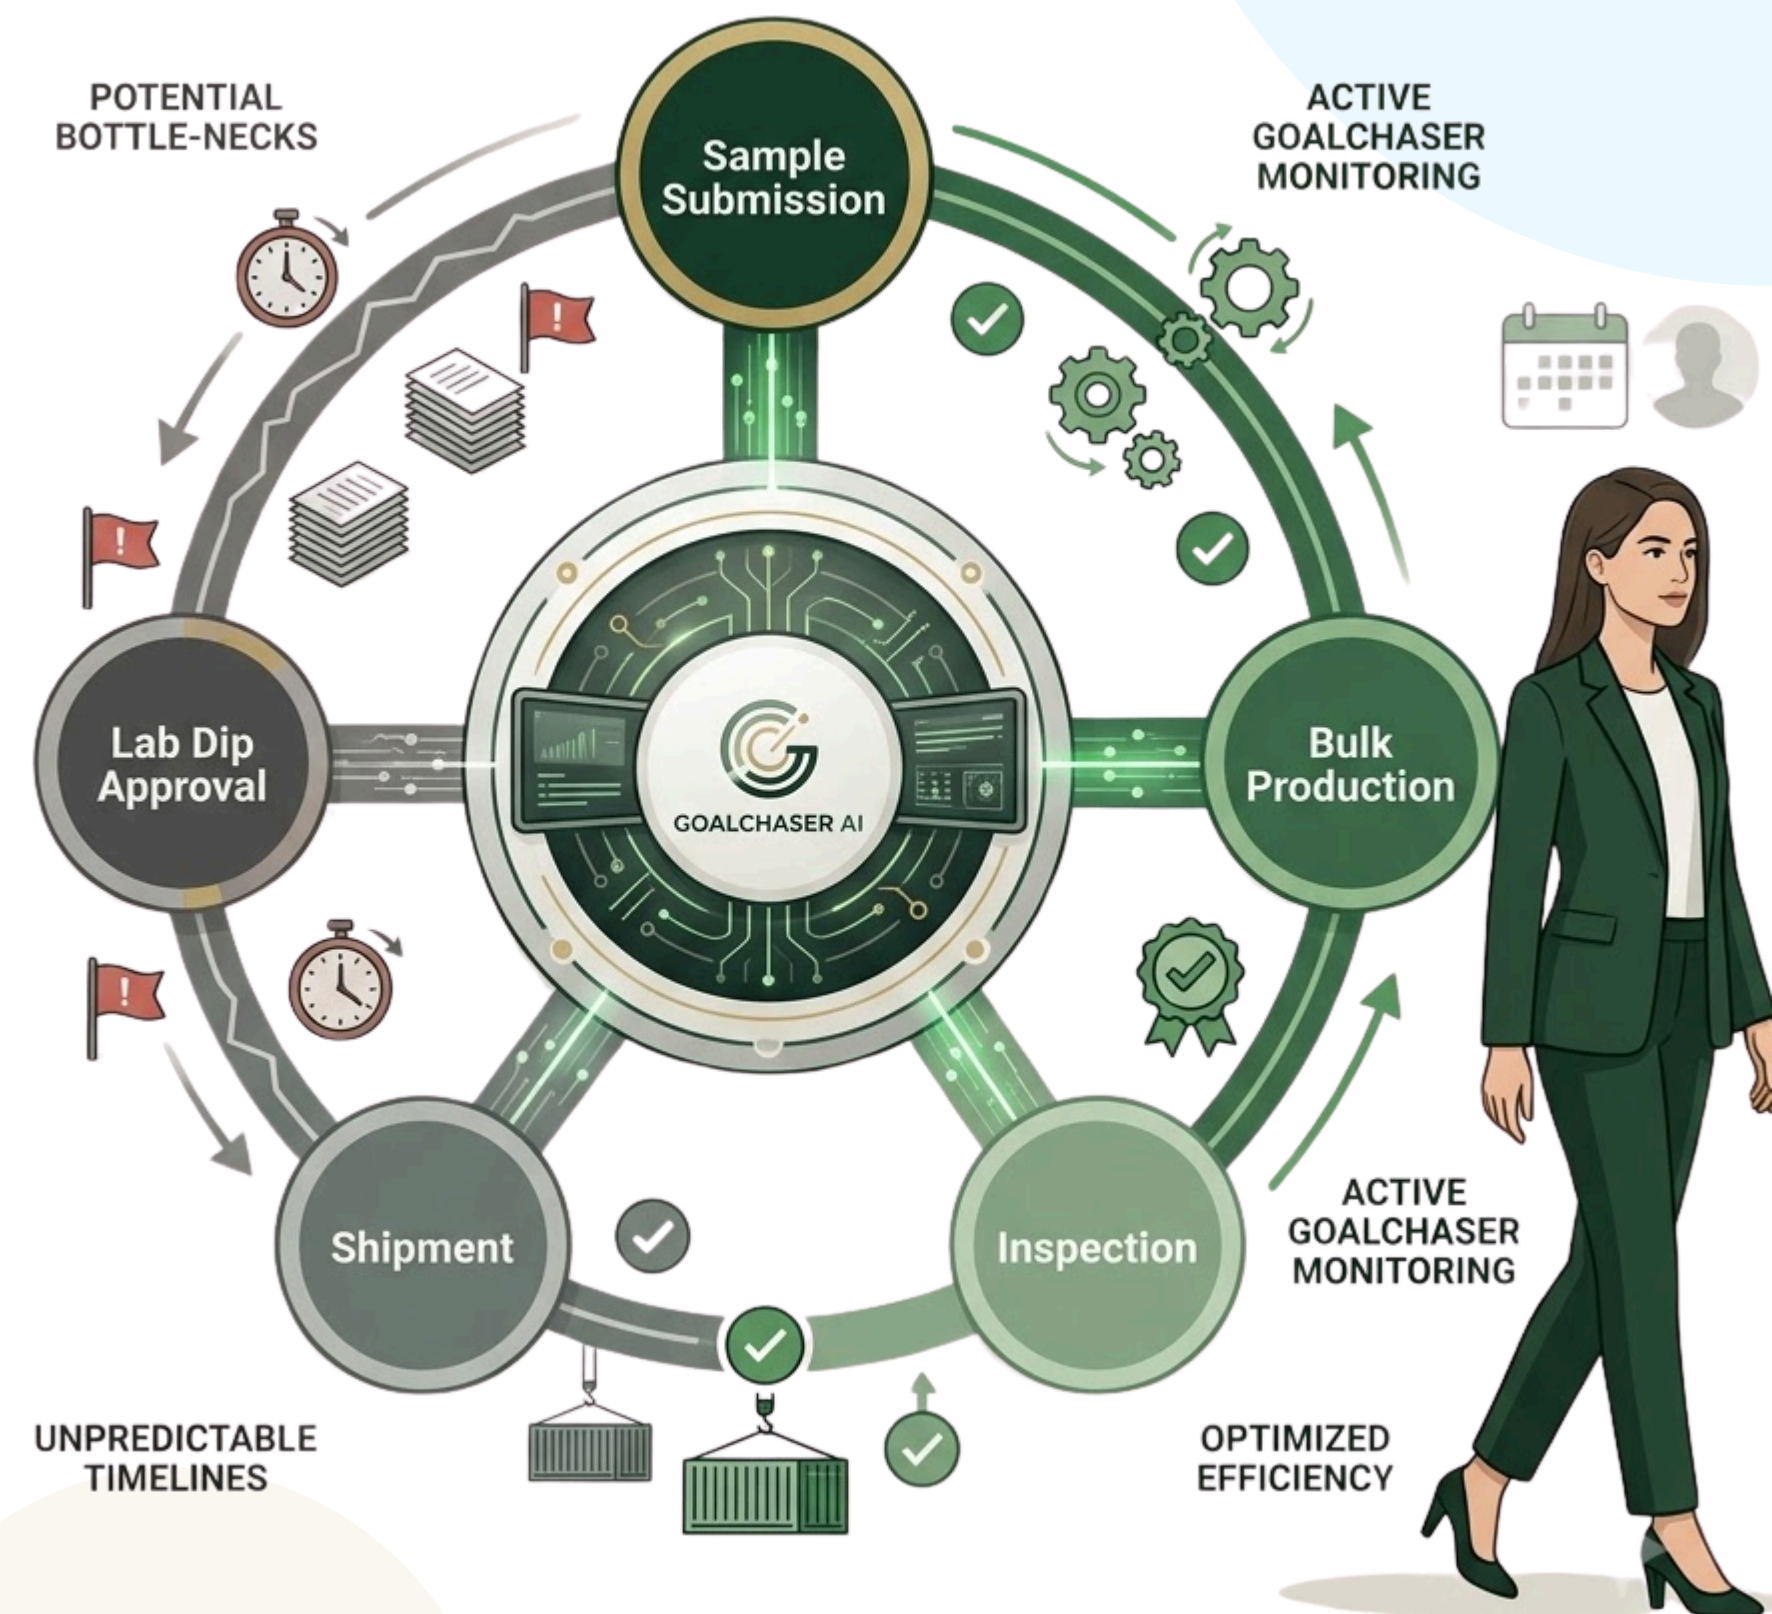

GoalChaser escalates every unresolved problem - automatically, at the right pace.

- Hold **raised** on the floor → QC Manager notified within minutes
- **Unresolved** after 4 hours → GM Production receives an alert
- Same defect appearing across **multiple** lots → surfaced as a systemic issue
- Every hold is timestamped, **tracked**, and closed - nothing disappears quietly

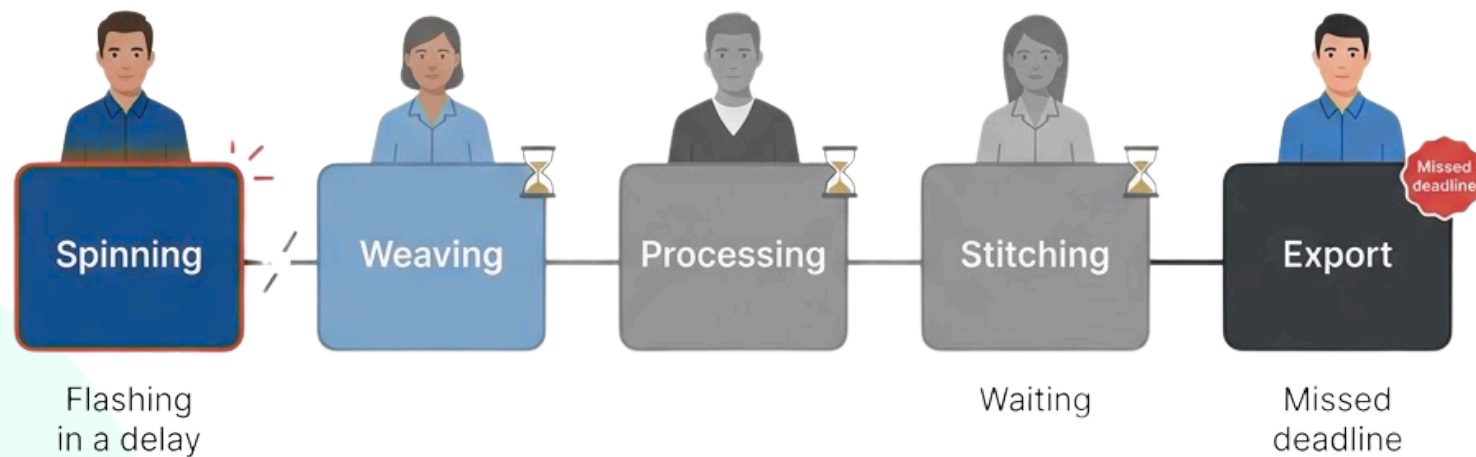

Buyer Deadlines Can't Wait for **Someone** to Remember

GoalChaser owns the follow-up chain - not your merchandiser.

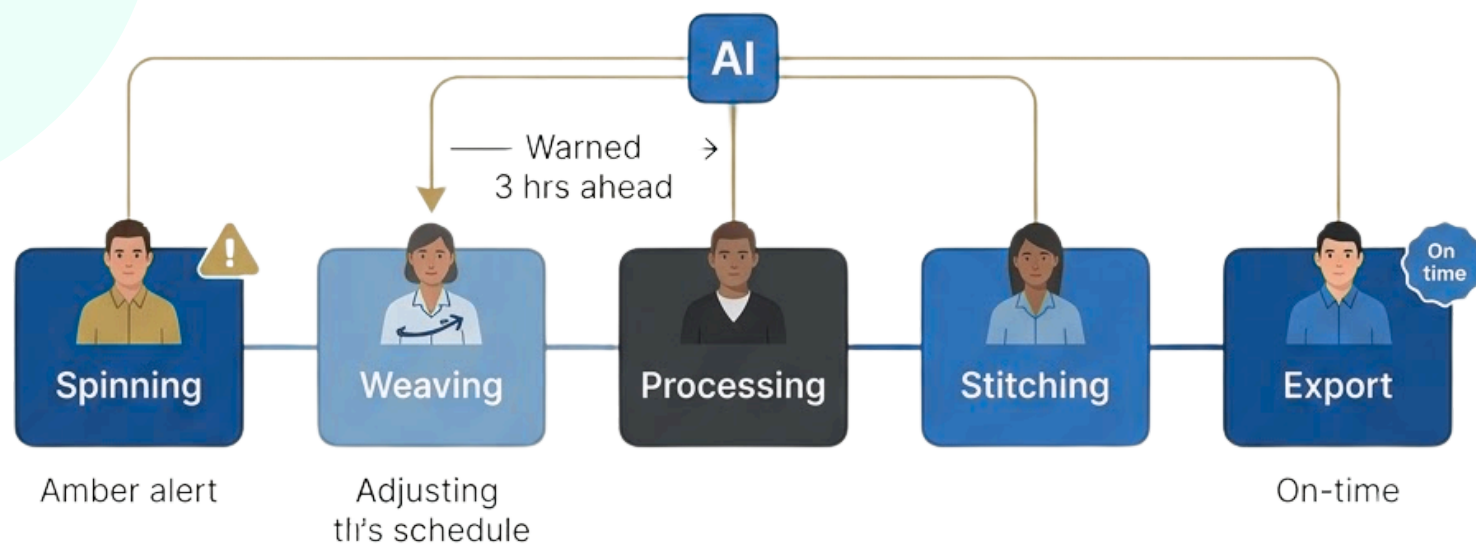

- Lab dip **pending** 48 hours? Buyer follow-up triggered automatically
- **Strike-off** not approved? Merchandising manager is flagged
- **Merchandiser** on leave? Every order still runs on schedule
- Shipment **date** at risk? Buyer is warned proactively, not after the miss

Today

With GoalChaser

GoalChaser Sees the **Whole** Factory. Not Just One Department.

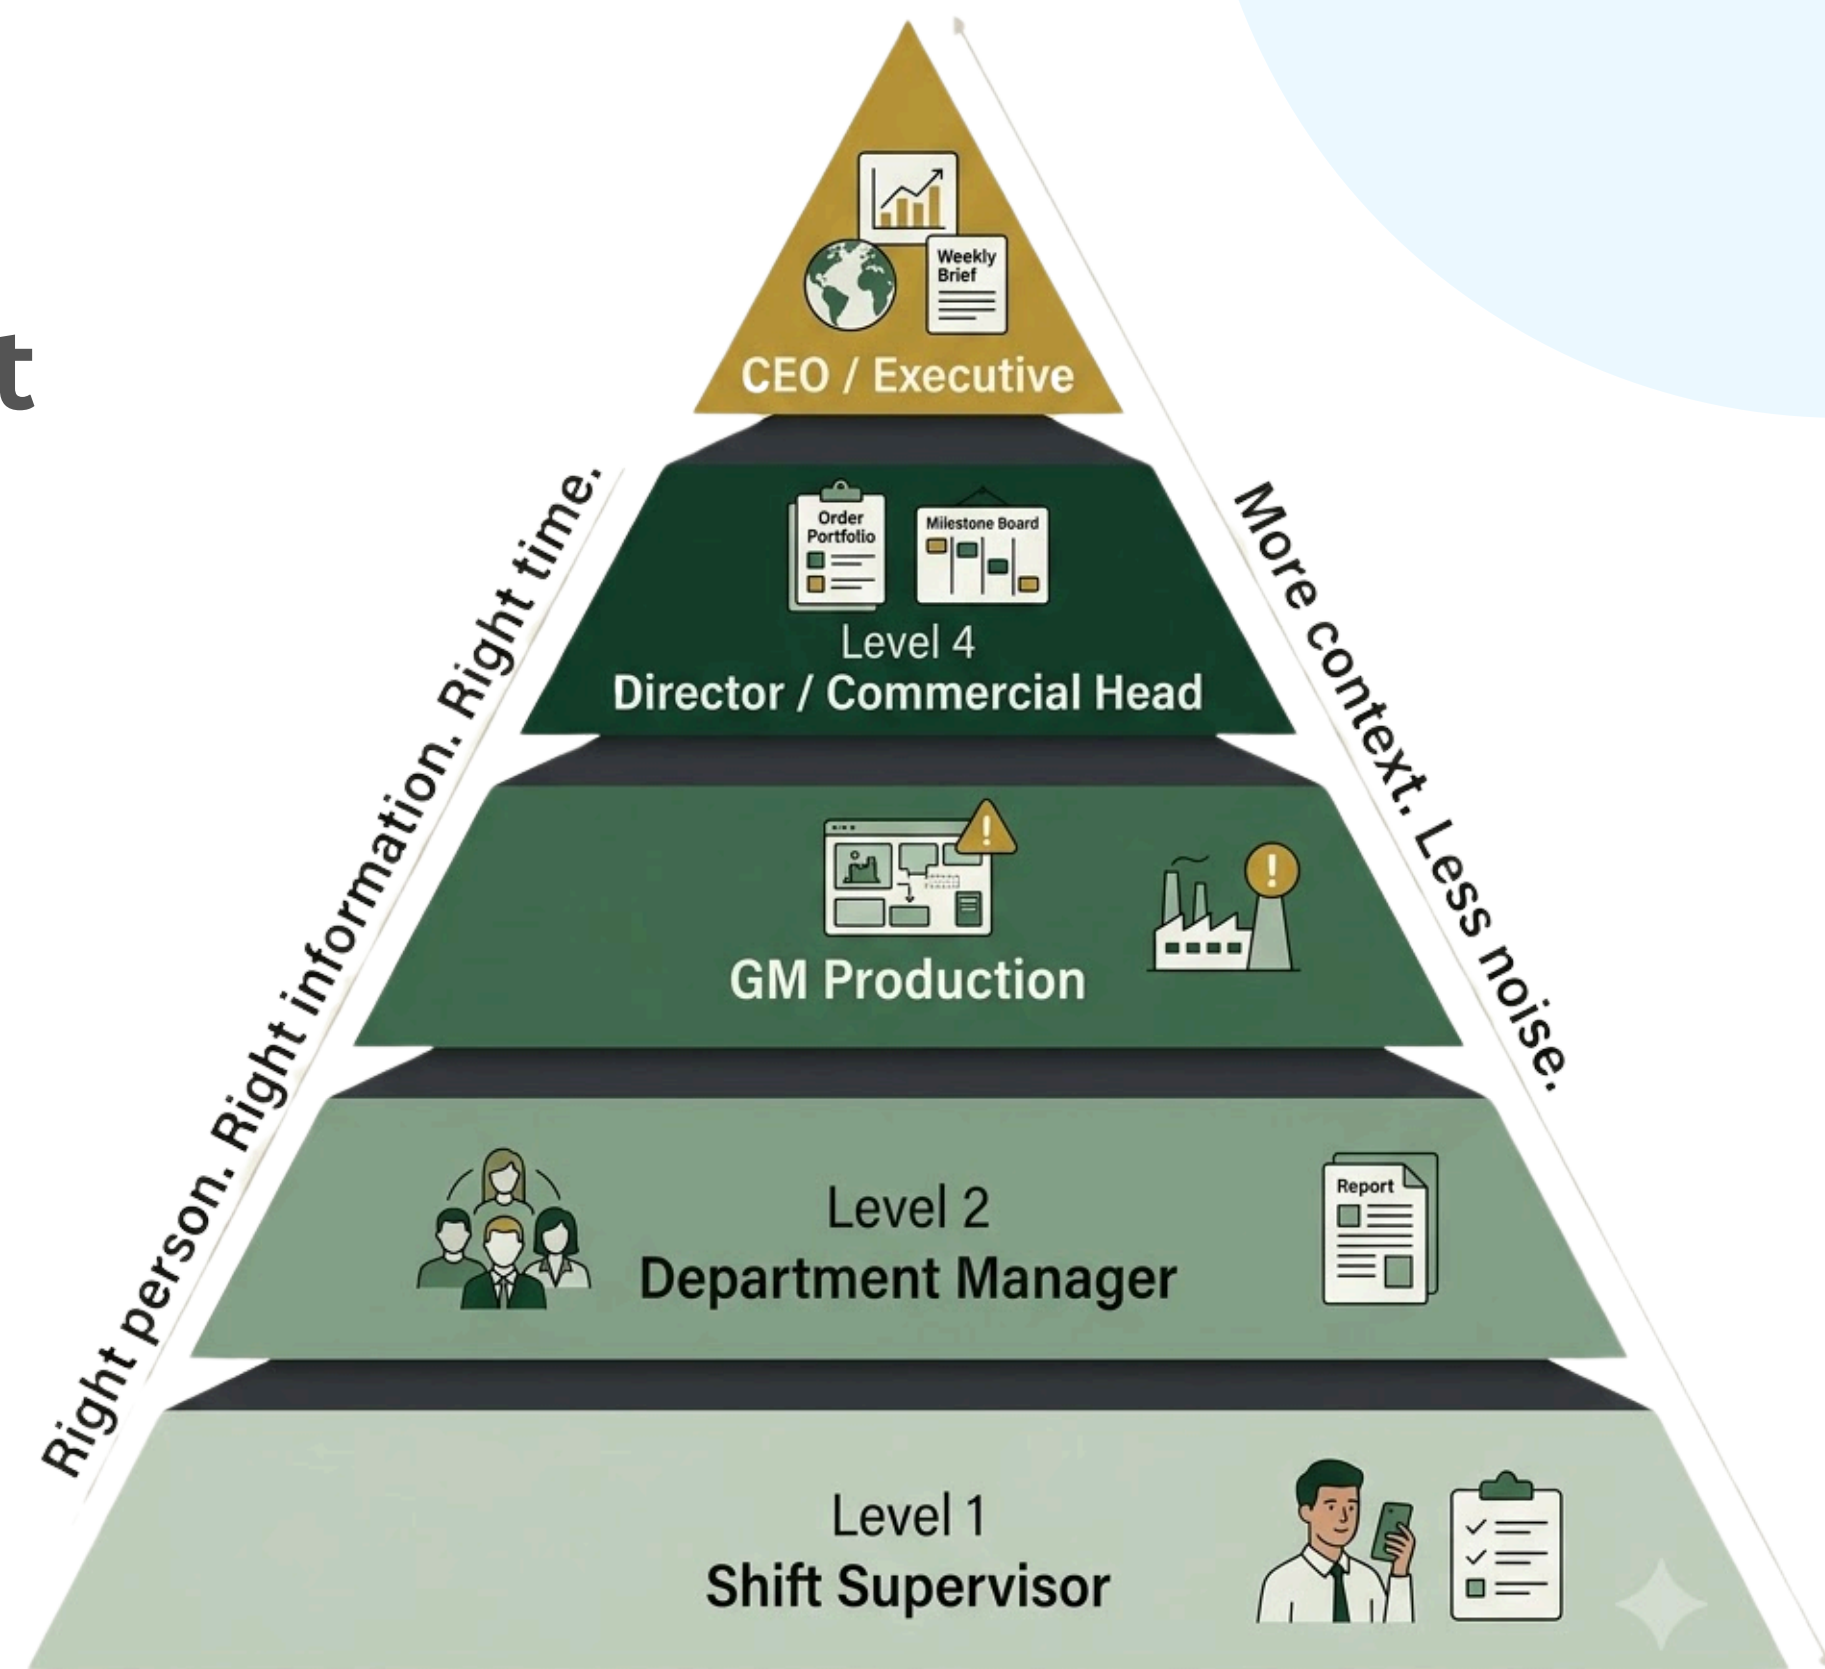

When Spinning falls behind, GoalChaser warns Weaving before the gap hits them.

- Every **department** is called every shift - information flows both ways
- A delay in **one place** is flagged to the next in minutes, not hours
- PPC re-sequences before idle time is created, not after
- **No** department is a silo when they all report to the same AI

Every Person Gets **Exactly** What They Need - Nothing More

GoalChaser filters information by role. No one is overwhelmed. No one is left blind.

- **Supervisor:** their shift summary, their tasks, their flagged items
- **Department Manager:** full team report, blockers, active holds
- **GM Production:** all departments, real-time risk map, overnight digest
- **Directors:** all orders, all milestones, escalation inbox
- **CEO:** factory-wide health score, delivery trends, weekly AI brief

Before

- ✗ Shift handover lost in conversation

- ✗ Breakdown found hours too late

- ✗ Quality hold sitting unresolved

- ✗ Buyer deadline missed silently

- ✗ Manager attends 3 status meetings daily

- ✗ Every department a separate island

With GoalChaser

- ✓ Every shift captured in a 3-minute call

- ✓ Maintenance alerted the moment it's mentioned

- ✓ Escalated automatically within minutes

- ✓ AI owns every follow-up — nothing missed

- ✓ One morning report — no meetings needed

- ✓ Whole factory visible as one connected chain

Same Factory. Same Team. Different Information Flow.

GoalChaser doesn't change how your people work, it changes what leadership knows and when.
